

Source Water Protection:

Planning for the Future of Source Water

February 8–9, 2007

Vancouver, British Columbia, Canada

*It's About What
You Know.*

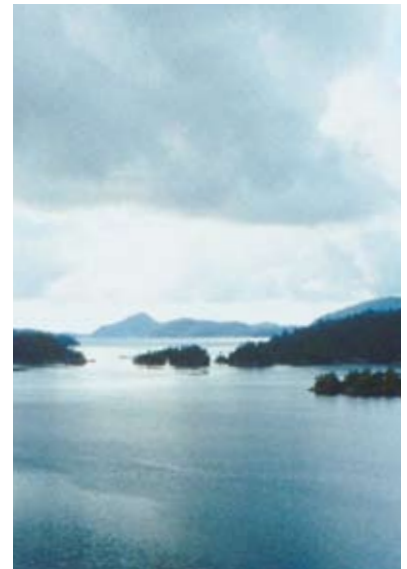

AWWA Seminars

CEUs 1.2 / PDHs 12.0

Source water protection is a strategy for effectively protecting source water quality and public health. As utilities are faced with diminishing supply and increasing threats to source quality, proactive planning will help ensure a high-quality, sufficient water supply for years to come. Not only will you learn about source water protection plans in detail, you will learn how to determine source water susceptibility and how to develop emergency plans.

You will be able to:

- ▶ Understand the development of a source water protection plan (SWPP)
- ▶ Delineate and evaluate source water protection areas
- ▶ Identify a variety of contamination sources
- ▶ Assess source water susceptibility
- ▶ Plan for public participation and education
- ▶ List funding options for source water protection programs
- ▶ Gain the knowledge to implement a source water protection plan
